About BCL Computers

BCL Computers leads the industry in providing the tools necessary for document management and web publishing. We specialize in developing software solutions that analyze, manipulate and use information that is stored in different file formats. We concentrate a large portion of our research and development efforts in text and speech based Human Computer Interaction (HCI) software. The BCL Computers R&D team is continuously developing products that enhance our computer based document management systems. Areas of expertise also include neural networks, fuzzy logic, database technologies and natural language processing.

BCL Computers is partially sponsored by federal research contracts under the Small Business Innovation Research Program (SBIR) and the Advanced Technology Program (ATP). BCL Computers has received 8 SBIR contracts in the area of document and speech communication and one ATP contract in spoken language systems. We have over 12 patents issued and pending. Our proprietary document management technology now assists in commercializing digital library information for NASA*, NSF* and DARPA*. Years of steady progress and innovative breakthroughs backed by government-sponsored research have established BCL Computers as leaders in the document management industry.

BCL has been successfully working with companies to improve their workflow efficiency since 1994. The company's policy has always been not only to give an immediate solution to meet its clients' needs, but also to help companies grow in their respective fields.

Product Services Solutions

Our **Software Solutions** streamline the document management process – automating it while maintaining the content, appearance and flow of the original documents. Our products range from **publishing** in authentic HTML to **archiving** documents with industry standard TIFF. Using our resources, anyone can create a PDF file, **extract** information to universal RTF or **convert** a document to any format.

Combined with our **Server Solutions**, the power of these products becomes immeasurable. We offer a **free online conversion service** to showcase what some of our products are capable of.

BCL Computers will also **customize** these software solutions to address the specific document management needs of individual companies.

BCL Software Solutions

PUBLISHING

BCL Magellan — Publish whole documents in HTML

Magellan 5.0® allows you to convert documents into HTML4 for online browsing. Magellan 5.0® uses a unique process that preserves your original document's layout — complete with graphics, lines, hyperlinks, and bookmarks — while transforming it into a useable, searchable web document.

ARCHIVING

BCL Freebird — Archive documents in graphical formats

Freebird 5.0® allows you to convert your documents into multiple graphic output formats for archival purposes. Freebird 5.0® is an excellent tool for archiving data when you want to maintain the look and feel of your original document without losing graphic clarity or integrity.

INFORMATION EXTRACTION

BCL Jade — Extract information from your documents

With Jade 5.0®, you can accurately extract data that would otherwise be unobtainable from your documents. Using the unique “zoning” feature, Jade 5.0® allows you to extract text, tabular data, and graphics so that you can edit the information in Windows applications such as Microsoft Word®, Excel®, and Adobe Photoshop®.

DOCUMENT FORMAT CONVERSION

BCL Drake — Convert whole documents to RTF

Drake 5.0® quickly and accurately converts entire documents into editable Rich Text Format (RTF) documents. The extraction process is similar to BCL's Jade 5.0®, and both of these applications produce high quality output. The main difference is that while Jade 5.0® allows you to extract key segments of your documents, Drake 5.0® automates the zoning process and instantly creates RTF output!

BCL easyPDF — Produce PDF files from any application

BCL easyPDF® converts whole documents to Portable Document Format (PDF) by utilizing the print function of any application. Convert any document to PDF by printing to “BCLeasyPDF” as you would print to a standard printer.
